Peter 北京求职记

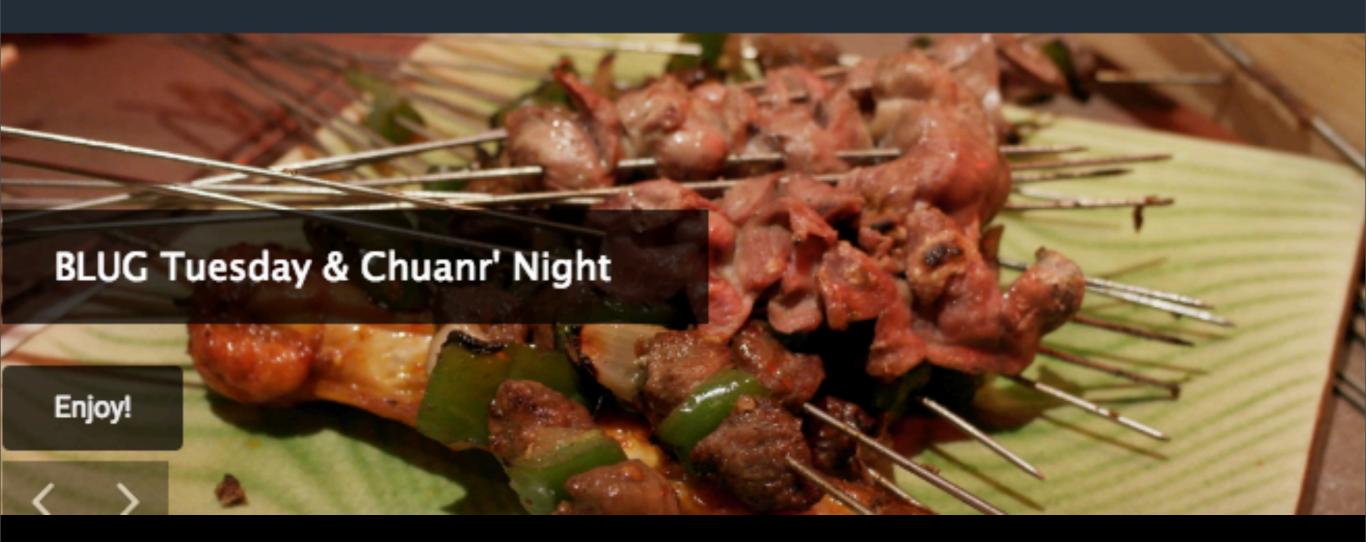

嵌入式 Linux C/C++ English 能力交叉形成差异竞争力

找工作心经? 形成人脉

3

Home Events Contacts V Photos Wiki About

简历心经? 有事说事+没事装X

education

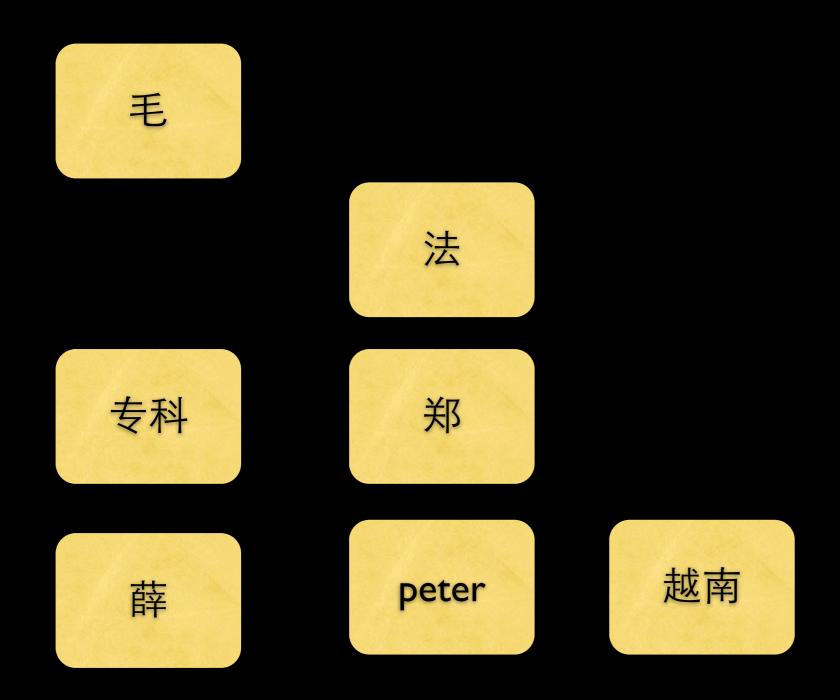

project

I was born in a small villege not far from the sea Peach flowers was the most befutiful thing in my eyes when I was small,

Until several years later I found girls were even more attractive!

面试心经? 真诚+主动

IT is busy? It depends!

北京离硅谷比美国东岸还要近

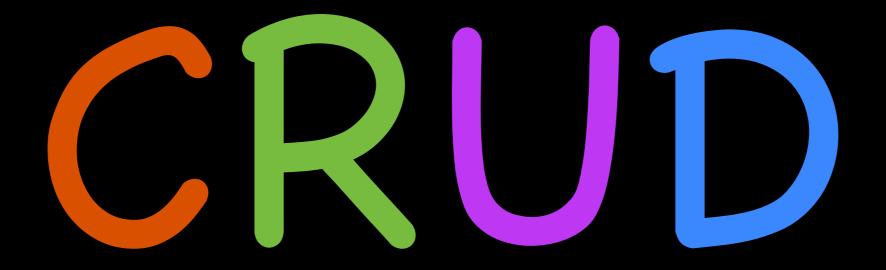

end

从客户端操作数据库

前天: 用数据库自己的命令

前天:用 JS (服务器端的)

今天: 用 JS (客户端的)

Request Verb PATH

get
post
put
delete

/about /posts

```
GET /posts
POST /posts
PUT /posts/:post_id
GET /posts/:post_id
DELETE /posts/:post_id
```

读取所有文章 新建一篇文章 更新一篇文章 读取特定一篇 删除特定一篇

这就是所谓的 REST 架构

express 路由控制

╀

mongoose

第一个任务 实现 express 路由

express 路由

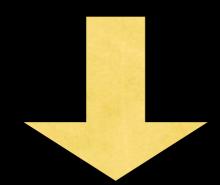

跑在服务器上 响应客户端发出的 request 决定哪部分后台代码要被执行

第二个任务 学会用 curl 调试 API

curl — request PUT localhost:3000/posts/124

I Wish You A Happy Holiday! I Wish You A Happy Holiday! 客户端 服务器端 react express json js

Advanced REST client

CURL

curl -H "Content-Type: application/json" -X POST -d '{"title":"myTitle","content":"myContent"}' http://localhost:3000/posts

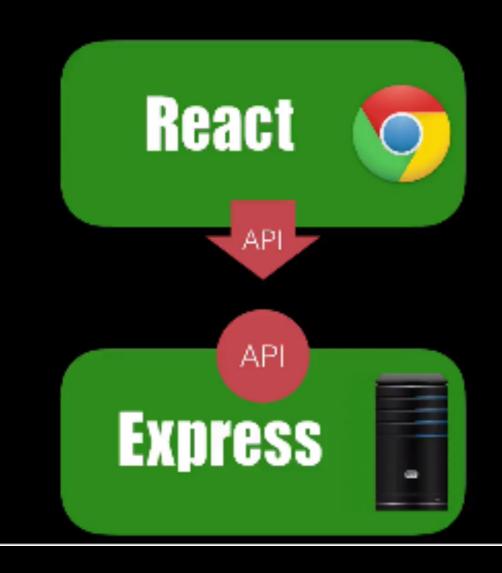

第三个任务获取提交数据

req.body

第四个任务 connect 数据库 mongodb

mongoose

designer developer js react json express

AP

- I.API 是由当前程序提供出来的
- 2. 提供给另外一个程序的开发者来使用的
- 3. 作为前端开发者,我们所说的是 Web API

https://en.wikipedia.org/wiki/Web_API

AP

API 本身 就是一个 请求

verb path

API 请求的结果 就是 json 数据

List a user's gists

List public gists for the specified user:

GET /users/:username/gists

https://developer.github.com/v3/
